

Prepare the work

From organization setup to an invitation ready to use.

1 Choose the organization

Sign in to GeoField GPS and confirm the organization you are working in. Check the available tracker capacity before inviting anyone.

2 Prepare the person and assignment

Register the person in Personnel with the correct email. Create the geofence and an active assignment with valid dates and working hours. Invite tracker only lists people with current assignments.

3 Send one invitation

In Invite tracker, select the person, check the email and press Send invitation once. Wait for confirmation. The form blocks repeat submissions while processing and after a successful send to that recipient.

4 Arrange verification

Ask the recipient to use their work Android phone and invitation email. Keep Tracker / Tracking dashboard open to confirm that positions arrive.

Before leaving

Correct organization · checked email · current assignment · available capacity.

Install and activate

The Android app tracks the phone location.

1 Install GeoField GPS

Use the official installation link provided by your organization and keep the app updated through Google Play. Activate it on the same phone you will carry during work.

2 Open the latest invitation

Open the latest email on your phone and follow the invitation link. If it opens in Chrome or Gmail, continue in the GeoField GPS app. The browser alone cannot start Android tracking.

3 Review and accept

Read the location notice and accept only if you agree. If asked to sign in, use the recipient email. Choose I already have the app when offered and grant the requested permissions.

4 If you received a code

Alternatively, if your administrator provided a pairing code, sign in with Magic Link and use Activate tracking with code on the corresponding screen. Do not share the code or invitation link.

Expected result

Tracking active on the phone is the first check. Also confirm a recent position in the dashboard.

Verify tracking

Check both ends before starting work.

1 Location and internet

Keep precise location and internet access enabled. Allow location all the time in the app settings if Android requests it for background tracking.

2 Phone permissions

Review unrestricted battery use, autostart and background data. Names and availability depend on the phone manufacturer. Use the critical tracker permission shortcuts and confirm the settings in Android.

3 Confirm a received position

In the Tracking dashboard choose the correct organization and tracker. Review the time and status filters, refresh, and check Last position and Last update. Confirm that the timestamp advances.

4 During work

Keep enough battery and avoid force-stopping the app. When finished, you can revoke location permission in Android to stop access; notify your administrator if you should no longer share your location.

Departure check

Active phone + recent dashboard position. If only the phone shows active, follow the checks on the next page.

Solve common issues

Check these causes before sending another invitation.

1 Invitation not found

For `invite_not_found`, check that you opened the latest email and the complete link. An earlier link may have been replaced. If the latest one fails, ask the administrator to review the invitation.

2 The link stays in the browser

Check that the Android app is installed and updated. Open the link with GeoField GPS; if needed, review Open by default in its Android settings. Do not use the Preview app for a Production invitation.

3 Active phone, offline dashboard

Check internet, GPS, permissions and battery saving. The administrator should check the organization, filters, assignment and working hours, and that the person is linked to the correct user.

4 Plan or capacity blocked

The administrator should review plan status and tracker usage. Do not repeatedly send to bypass a limit. For support, provide the time and error message; never share tokens, private invitation links or passwords.
